

IN THE CLAIMS

Please accept amended claims 1, 6, 7 and 8, and cancel claims 9 and 11-31 as follows:

1. (Currently Amended) A color filter panel for a liquid crystal display,
comprising:

a substrate;

a light-blocking member formed on the substrate;

a color filter formed over the substrate; and

a passivation layer that covers the color filter and that has a varying thickness,

wherein a first portion of the color filter overlaps the light-blocking member.

2. (Original) The color filter panel of claim 1, wherein the liquid crystal display includes a first display area that displays images using a light source provided therein and a second display area that displays images using an external light.

3. (Original) The color filter panel of claim 2, wherein the thickness of the passivation layer in the first display area is smaller than the thickness of the passivation layer in the second display area.

4. (Original) The color filter panel of claim 3, wherein the thickness of the passivation layer in the first display area is zero (0).

5. (Original) The color filter panel of claim 2, wherein the thickness of the color filter in the first display area is larger than the thickness of the color filter in the

second display area.

6. (Currently Amended) The color filter panel of claim 1, wherein the color filter includes a ~~first~~ second portion and a ~~second~~ third portion, and the thickness of the color filter in the ~~first~~ second portion is ~~larger~~ smaller than the thickness of the color filter in the ~~second~~ third portion.

7. (Currently Amended) The color filter panel of claim 6, ~~further comprising~~ a wherein the light-blocking member ~~black matrix~~ is located near the edge of the color filter.

8. (Currently Amended) The color filter panel of claim 7, wherein ~~the color filter further includes a third~~ the first portion is located near the edge of the color filter, and the thickness of the color filter in the ~~third~~ first portion ~~being larger~~ is smaller than the thickness of the color filter in the second portion.

9. (Canceled)

10. (Original) The color filter panel of claim 1, further comprising a common electrode formed over the substrate.

11-31. (Canceled)
